

LaunchpadBay is a browser-based, collaborative launchpad — the kind of grid of glowing pads a DJ or producer uses to trigger and layer sound loops, except it runs entirely in the browser and is built for playing with other people.

• WORKING TODAY

The core launchpad experience, and user accounts under the hood.

🕒 COMING NEXT

Lobby presence, collaborative sessions, and private chat.

• THE LAUNCHPAD

A 5×5 grid of glowing pads, each row lit in its own color. Every row is its own independent sound channel — you build a beat by combining one loop from each of the five rows, layered together.

- **Tap a pad** to start that loop, perfectly in sync with everything else already playing.
- **Tap a different pad in the same row** and the sound you're switching away from finishes its current loop before smoothly handing off — no jarring cuts, just clean transitions.
- **Swap the whole vibe** — the background art, color palette, and full set of sounds are all part of a swappable "theme," so different sound packs can be dropped in without touching the app itself.

• ACCOUNTS

People can create an account and log in. Passwords are securely handled behind the scenes (properly hashed, never stored in plain readable form), and logging in issues a secure token that proves who you are for the rest of your session.

• WHERE IT'S HEADED

Lobby

See who else is online and currently playing, in real time.

Play together

Join someone's session and take turns controlling the launchpad — pass control back and forth.

Observe

Or just watch and listen to someone else's session without taking control.

Private chat

Message someone in the lobby one-on-one.
